

“By working with Calor, the LPG specialist, the installation can be handled smoothly and efficiently. Calor’s technical advice and an emergency call out service available all day, every day, gives added peace of mind to busy operations.”

“This means that diesel is just not an option for us. It would cover our products in a film of soot and this is unacceptable. Calor LPG is ideal – it is a cleaner burning fuel with reduced particulate emissions”

Calor has been supplying LPG for over 70 years. We have more experience and technical expertise than any other LPG supplier in the UK. Delivery is taken care of by the largest supply network and one of the largest fleets of delivery tankers in the UK.

The scale of our operation is matched only by the range of applications for Calor which we have developed and supported. As well as familiar uses like heating, hot water and catering, LPG can power cars, buses, vans, forklift trucks, generators and many other commercial and industrial applications. In fact, if you have a power or fuel requirement the versatility of Calor is sure to provide the solution.

Dunne fills up with new Calor LPG technology

“ Since the installation of our Calor bulk tank in 1986 and more recently, The ThinkTank[®] technology, Calor has helped develop our business with its innovative solutions. ”

- Dunne Animal Feeds relies on Calor to keep its forklift trucks on the move
- The ThinkTank[®] technology monitors gas levels
- The cleaner alternative – Calor LPG can be used in more sensitive environments
- LPG forklift trucks significantly reduce emissions keeping products free from particulate residue

- BUSINESS Dunne Animal Feeds
- NAME Mr. Dunne
- POSITION Managing Director

Pet food distributor, Dunne Animal Feeds is continuing to reap the benefits of installing liquefied petroleum gas (LPG) and The ThinkTank® telemetry technology from Calor.

Since 1986, Dunne has worked closely with Calor – the UK’s leading supplier of LPG – to power its fleet of Toyota fork lift trucks. The 1.5 tonne capacity forklift trucks are used to load and unload delivery vehicles with pet supplies and store and stack goods in the warehouse.

LPG - Reliable supply

Ensuring pet supplies are distributed to the company’s customers on time is key to its business success. Mr Dunne, Managing Director of Dunne Animal Feeds, highlights the importance of Calor LPG to his business: “We supply many retail operations around the country and have a commitment to our customers to fulfil their orders on time. The forklift trucks are an integral part of ensuring we meet these targets and so we need an accessible fuel source we can rely on.

“Calor LPG is available as a constant supply from the bulk tank installation and the trucks can be refuelled in minutes,” he adds.

Calor LPG is a cleaner burning fuel with reduced particulate emissions.

Calor - The clear, cleaner choice

A core part of Dunne's business is the distribution of a wide variety of pet food and in order to meet strict Health and Safety Regulations and to satisfy customers it is essential that all product packaging is kept clean and any risk of product contamination is minimised.

“Calor LPG is available as a constant supply from the bulk tank installation and the trucks can be refuelled in minutes.”

Mr Dunne explains: “Retail outlets can refuse deliveries if the packaging is dirty. It is our commitment to the customer to supply them in a clean and presentable state.

“This means that diesel is just not an option for us. It would cover our products in a film of soot and this is unacceptable. Calor LPG is ideal - it is a cleaner burning fuel with reduced particulate emissions.” he says.

Removing the burden

Dunne's has benefited from Calor's latest telemetry technology, The ThinkTank®, which is connected to its existing bulk tank. The ThinkTank® consists of a contents gauge that automatically monitors how much gas is left in the tank and sends a signal to the Calor depot when a top up is required. Fitting the system takes very little time and causes no disruption to the business.

Calor LPG keeps forklift trucks on the move.

Mr Dunne is pleased with the positive impact it has had on his business. He says: “The ThinkTank® allows me to spend more time running my business without the added burden of having to worry about gas levels.”

Calor's forklift truck specialist, Jason Whitwell, says: “Logistics businesses like Dunne Animal Feeds, who supply to retailers, are clearly seeing the advantages of powering their fleets of forklift trucks with cleaner burning LPG. With the added benefit of The ThinkTank® technology, Calor takes on the burden of fuel supply and allows customers to concentrate on their business.

“The ThinkTank® allows me to spend more time running my business without the added burden of having to worry about gas levels.”
